FOR AUTUMN PLANTING.

## R. & J. FARQUHAR & CO.

16 AND 19 SOUTH MARKET ST.

BOSTON, MASS.

# TO PATRONS.

Our Mr. JAMES FARQUHAR has been in Europe for the past three months attending to our importations of Bulbs, Seeds and Plants. He was also in Europe at the beginning of the present year in the same interests.

It has been our custom for many years to visit sources of supply the world over, and we have been enabled thereby to obtain and supply the finest productions in our various lines.

Our Dutch Bulbs are the finest brought to the United States; the Growers in Holland admit this, and one of our leading firms has informed us that our Contract to them for the present year was the largest placed in Holland by any American House.

We solicit a trial order from any one who may have not bought previously from us, and we invite intending purchasers to call and examine our Bulbs.

---

## BULBS BY MAIL.

Bulbs securely packed will be sent by mail, POSTAGE PREPAID, to all parts of the United States, at the single or dozen prices quoted in the Catalogue, excepting a few heavy species for which the mail prices are given.

---

# HYACINTHS.

## NOTES ON THEIR CULTURE.

**HYACINTHS IN POTS.**—It is important in the pot culture of the Hyacinth to have rich light soil ; a compost, one-third decayed turf, one-third rotted cow manure — a year old at least — and the remainder equal parts sharp sand and leaf-mould, will be found excellent. The compost should be made a few weeks before being used. If the bulbs are to be potted singly, pots five inches in diameter should be used. Cover the hole in the pot with a piece of broken pot and over this place a layer of moss, which will keep the soil from clogging the drainage thus provided. Break off any offsets which appear at the base of the bulb, and in potting place the bulb so that its top shall be half an inch below the level of the surface of the soil, and about an inch below the rim of the pot. The soil should be moderately moist and should not be pressed too firmly. The filled pots may be placed in a cold frame where there is protection from frost, and well watered. An excellent plan is to place them on a bed of moist, sifted coal ashes, covering the pots to a depth of six inches with the same material. When well rooted, which will be in four to six weeks, they may be brought indoors and forced. For the first two or three weeks they should be kept in a temperature not exceeding 50 degrees. Success in forcing them depends much in their having strong roots before being brought to the light. The top grows rapidly and unless the roots are started much in advance, they are unable to nourish it and failure results.

Hyacinths for early use may be potted in September, although October is perhaps the best time ; late planting is not advisable as the bulbs deteriorate ; it is better to pot them in October and keep them in a cold frame above freezing, when desired for late use.

To obtain dwarf foliage and fine flower spikes, Hyacinths when being forced, should have plenty of manure-water, fresh air, and be kept very near the glass. The blooms last much longer if shaded from the sun.

**HYACINTHS IN GLASSES.**—The single varieties are, with a few exceptions, best adapted to this mode of culture ; they produce finer flower spikes than the double.

Fill the glass with clear soft water so as nearly to touch the base of the bulb, putting a small piece of charcoal in each glass to keep the water pure and afford some nourishment. The filled glasses should be placed in a dry, cool, dark place, and kept there until the roots almost touch the bottom of the glass, when they may be exposed gradually to the light. If the water in the glasses becomes foul, or diminished, replace it with fresh water about the same temperature as the atmosphere in which the bulbs are growing ; otherwise it need not be changed.

When well started, the bulbs should have plenty of light and air, but without draughts, in order that the best development and brilliancy of color may be attained.

**HYACINTHS IN THE OPEN GARDEN.**—The ground should be dug to a depth of at least fifteen inches and enriched with plenty of well-rotted cow manure.

Hyacinths may be planted from September until winter sets in ; although if the highest success is sought, they should be in the ground by the end of October.

Bulbs planted early, develop roots in the autumn and these, if protected from injury by freezing and thawing alternately during the winter, enable the bulbs to produce much larger flower spikes than if the roots are not developed till spring. Frost reaching the bulbs raises them up, thus detaching them from their roots. Protection may be afforded by covering the beds with straw, or leaves, to a depth of six or eight inches, which should be removed early in spring.

Hyacinths should be set about six inches below the surface of the ground and about six inches apart.

### EARLY ROMAN HYACINTHS.

These beautiful Hyacinths have now become exceedingly popular. Their graceful, feathery, delicately-scented flower spikes, often three or four from a bulb, are indispensable to the florist-in his Autumn and Winter cut flower work; while to the amateur, they are among the most easily cultivated and most satisfactory of flowering bulbs. The white variety, if planted early in September and gently forced, will bloom in November, the others require from two to three weeks longer.

When grown in pots or pans, they are most effective planted in groups of six or more bulbs in each.

### WHITE ITALIAN, OR PARISIAN HYACINTHS.

These are about a fortnight later than the Early White Roman Hyacinths, and the blossoms somewhat larger. They are very useful for forcing, being fragrant and decorative. Each, 5 cents; per doz., 50 cents; per 100, \$3.00.

By mail, add 10 cents per dozen for postage.

### MINIATURE DUTCH HYACINTHS.

These bloom early, their pretty little flower-trusses being exceedingly fascinating. Being hardy they are available for outdoor as well as house cultivation.

For out-door Spring decoration none of the bulbous plants are quite so popular with us as the Tulip. Being exceedingly hardy, Tulips are seldom injured by the rigour of our winters; they are easily grown and produce the most gorgeous display.

They are equally valuable for winter cultivation in the greenhouse or window.

**OUT-DOOR CULTIVATION.**—The beds should be made perfectly loose to a depth of fifteen inches and liberally enriched with well-rotted cow manure. The bulbs should be set five inches deep and five or six inches apart. October is the proper time to plant Tulips, although they may be set out during November if the ground remains open. Before winter sets in the beds, like all bulb beds, should be covered with leaves or other mulch to a depth of six inches, to protect the bulbs from freezing and thawing repeatedly. The mulch should be removed early in spring, but a little of it may be loosely replaced over tender shoots above ground for a few days to avoid exposing them too suddenly.

**INSIDE CULTIVATION.**—The soil should be a compost similar to that recommended for Hyacinths. Tulips are most effective when planted in bulb pans, which should not be less than six inches in diameter: six bulbs in a six inch pan, nine to an eight inch pan and twelve in a pan ten inches in diameter. The bulbs should be planted in October and kept moist in a dark cool place, protected from frost, until they have rooted. Unless wanted for early forcing it is beneficial to keep them dark until the tops have started two or three inches above the soil, when they may be brought gradually to the light.

 on the State House Grounds, Boston. (Engraved from a Photograph.)

COMMONWEALTH OF MASSACHUSETTS.

OFFICE OF SERGEANT AT ARMS,

MESSRS. R. & J. FARQUHAR & Co.,

STATE HOUSE, BOSTON.

*Gentlemen:*—We consider it a pleasure as well as a duty to write you that the eight thousand Hyacinth and Tulip bulbs furnished by you for the State House Grounds are in full bloom; each and every one absolutely perfect. We are more than satisfied.

Yours truly,

Signed,

G. M. F.

## DOUBLE TULIPS.

A very ornamental and useful class, flowering usually about ten days or two weeks later than the Single Early Tulips. They are deservedly popular for bedding in both public and private grounds, the large double pæony-like blossoms being highly decorative and long duration.

**FARQUHAR'S RAINBOW MIXTURE.** (Trade Mark Registered.) This mixture is composed of the best named sorts of bedding Double Tulips, grown separately and put together in studied proportions. It contains a liberal allowance of the showy light colors, white, yellow, pink, etc.; and all the sorts are selected to be of nearly uniform height and to bloom at nearly the same time. Only large bulbs of finest quality are included.

Per doz., **30 cents**; per 100, **\$2.00**; per 1000, **\$16.00**.

**Selected Mixture.** Extra quality bulbs in a great variety of beautiful colors. Per doz., **20 cents**; per 100, **\$1.25**.

**Superfine Mixture.** Large bulbs in choice variety, mixed as imported. Per doz., **15 cents**; per 100, **\$1.00**; per 1000, **\$9.50**.

Parrot Tulip.

NARCISSUS.

Narcissus Trumpet Maximus.

Among cultivators the commercial florists have been foremost to give the Narcissus or Daffodils the attention due them. They have learned how easily and successfully these lovely flowers may be forced into bloom during winter (even as early as Christmas) and how fascinating and lasting are the blossoms. They may be planted in pots or bulb pans six inches or more in diameter, several bulbs in each, according to size, and treated in the same manner as Hyacinths.

Narcissi are equally desirable for spring bedding. They should be planted in October or early in November to produce the best results. The bulbs should be set from four to five inches deep; the larger sorts five or six inches apart, and the small varieties three to four inches. They should never be planted in very windy situations. Groups of Daffodils in borders of hardy herbaceous plants and along the edges of shrubby beds are exceedingly effective and delicately beautiful. They are charming, too, planted in beds, especially when combined with an undergrowth of the blue Scilla Siberica, Forget-me-not, or other dwarf spring flowers.

R. & J. FARQUHAR & Co.,

Gentlemen:—The Bulbs you sent me were remarkably fine. The Lily-of-the-Valley was the best I have ever seen, reducing 13 to 14 bells on a spike. Everything sent was highly satisfactory.

Yours very truly,

FAIRLAWN, NEWPORT, R I., Jan. 6, 1899.

Gardener for I. T. Burden.

## NARCISSUS JONQUILLA OR JONQUILS.

The delicately graceful forms, delicious fragrance, and deep yellow color of their blossoms, have made the Jonquils favorites of the amateur and necessities with the florist. They are easily forced, and if started early may be flowered by Christmas, or even earlier. Plant six or eight bulbs in a six inch bulb pan, covering the crowns half an inch, and treat them in the same manner as suggested for Hyacinths.

	Each.	Per Doz.	Per 100
<b>Double, Sweet Scented</b> , fine deep yellow . . . . .	\$0.05	\$0.50	\$3.50
<b>Single, Sweet Scented</b> , deep yellow; free blooming . . . . .	.03	.15	1.50

Double Jonquils.

## CHINESE SACRED NARCISSUS.

Joss Flower or Oriental New Year's Lily.

These may be grown in pots of earth, but are more interesting and very satisfactory in bowls partially filled with pebbles and water. As the roots develop they form a net-work about the pebbles, thus supporting the plant when in bloom. They should be started and grown in bright light, but carefully protected from draughts. The flowers are mostly white with yellow cups and are very fragrant.

In visiting China recently, we learned that the best bulbs are produced near Canton, and we have arranged for a supply from that locality.

POLYANTHUS NARCISSUS.

A very decorative class of bulbous plants for greenhouse and window cultivation, but not hardy out of doors in our climate. They produce enormous trusses of delicately fragrant flowers, varying in color from snowy white to deep yellow. Treat the bulbs in the same manner as noted for Hyacinths, except that the bulbs should be set half an inch deeper in the soil. They may be easily and quickly forced; our florists frequently have them in bloom by Thanksgiving.

## CROCUS.

With the first breath of spring the Crocus appears, often early in March. Its hardiness and earliness has made it one of the most cherished spring flowers. It is also highly ornamental, not only for bordering flower beds and shrubbery groups, but for planting in lawns, either promiscuously or in arrangements of color. The bulbs should be set three inches deep, and should be planted in October or early in November to insure success. They are very effective when combined with Snowdrops, Scilla Siberica, Daffodils and other spring flowers. The Crocus can also be grown indoors either in pots or bulb pans in loam; or, in dishes filled with wet moss in which the bulbs are set closely, half an inch below the surface.

**Begonia Gloire de Lorraine is one of the most charming winter-blooming plants.**

MANCHESTER GREEN, CONN., Feb. 28, 1899.

MESSRS. R. & J. FARQUHAR & CO.,

*Dear Sirs:* — The "Gloire de Lorraine" is the gem of my Begonia collection. It has been a mass of lovely bloom ever since November, and shows no signs of dropping blossoms yet. It is the first plant I ever owned that far excelled the picture of it in the floral catalogue. It seem as if it would exhaust its vitality. I feel very grateful to you for introducing such a plant to me.

Very sincerely yours,

H. E. S.

## ANEMONES.

None of the spring flowers surpass the Anemone in brilliancy of color and profusion of bloom. They are very lasting, and have of recent years become very popular for cut-flower use, and for table decorations. The florists now buy thousands of them to force. Plant in October or November, six roots in a six-inch pot or bulb pan, covering them one inch. They may be kept in a cellar or frame protected from frost till spring, when they may be placed in the greenhouse or window to bloom.

## IRIS KÄMPFERI. Japanese Iris.

In these we find combinations of form and beauty far excelling any other type. The stately flowers are often 8 or 10 inches in diameter, and of wonderfully varied and beautiful colors. They include pure white lightly veined with pale yellow, delicate shades of lilac, lavender and light blue, bright shades of rose and crimson, rich coppery red, claret, purple, violet and dark blue; in most of them the throat is blotched with deep yellow, and in some a veination of the same color over the entire flower, contrasting beautifully with the ground color.

This class particularly requires a rich, moist soil, which should be kept saturated while the flower spikes are being developed and while the plants are in bloom. *Roots ready in October.*

## LILIES.

No class of Bulbous plants supercedes the Lilies in stately decorative effect, elegance of form, richness of color and fragrance combined. The amateur, commercial florist and landscape gardener employ them more and more each year; their hardiness, adaptability, luxuriant florescence and long duration rendering them indispensable for purposes of decoration in every line of floriculture.

### LILIES FOR FORCING.

The bulbs may be potted from August onward in a compost of equal parts turfy loam, leaf mould, rotten cow manure and sand. It is best to start them in pots not exceeding twice their own diameter, in which they may remain till started eight inches or more. They should be transferred then to larger pots in which to bloom, exercising great care not to disturb the roots or break away the soil from about them, and setting them considerably deeper in the larger pots. This method prevents the soil becoming sour, and enables the roots forming at the base of the stem to become feeders, greatly increasing the number and size of the blossoms.

# LILIES FOR THE OPEN GROUND.

The increased production of many varieties of these in Japan has greatly reduced their cost, and in consequence their use has now become very general.

It is our opinion that we should plant the bulbs much deeper than we have done heretofore. While travelling in Japan recently, we found that the bulbs of the wild Lilies were usually twelve to eighteen inches below the surface, and we gathered the finest flowers from specimens growing on mountains of decaying lava where they had abundant rainfall and ample drainage. We believe that varieties like *Auratum* and *Speciosum* would be favored by being set ten or twelve inches deep and would be less affected by frost and drought. The beds should be thoroughly covered with leaves or litter during winter.

Many of the late-flowering sorts cannot be shipped until October; persons desiring to plant in the autumn should therefore prepare the beds and cover them with leaves to prevent the ground freezing until the bulbs arrive.

☞ The following Lilies sent by mail at the price of single bulbs.

LILY OF THE VALLEY.  
CONVALLARIA.

For open ground planting we offer large clumps, each containing many flowering crowns. These may be set from six inches to a foot apart and covered three inches. They succeed best in ground which is rather moist and partially shaded.

For forcing the pips are to be preferred, being grown under conditions tending to promote vigorous and early blooming. Twelve to eighteen pips may be planted in a 6-inch pot, with all the fibrous roots carefully preserved, and keeping the crowns above the soil. Place them in a temperature of about 80 degrees, cover the crowns with loose moss and keep them constantly moist with tepid water. They should flower in about five weeks.

Ready for delivery in November.

## HARDY PÆONIES.

These old fashioned, hardy plants are coming into popularity again, not so much the old sorts, however, as new forms and colors, which we have received from world-searching plant collectors and hybridists.

The "Botan" (*P. Moutans*) of the Japanese is one of the most valuable additions, many of the huge single, semi-double or full double flowers measuring 10 or 12 inches across and including in their type innumerable charming shades of white, blush, pink, rose, scarlet and crimson. There are also many magnificent new varieties of the Double Chinese Pæony.

Pæonies succeed best on rich, well-drained, sunny land, where they can be liberally supplied with water during the early summer months.

## BEGONIA GLOIRE DE LORRAINE.

Of all Winter-Blooming Plants, **Begonia Gloire de Lorraine** and its varieties, are the most lavish in their production of flowers. From October until May, the plants are so profusely covered with blossoms as to almost conceal the foliage. The flowers of **Begonia Gloire de Lorraine** are of a bright salmon-rose color, growing in large gracefully drooping panicles. Since its introduction this plant has been constantly gaining in popularity, so that the supply has been quite inadequate.

MR. WILLIAM FALCONER, Superintendent of Schenley Park, at Pittsburg, Penn., writing us, Feb. 25, 1899, says: "Begonia Gloire de Lorraine received today. It is a very beautiful little plant and so full of blossoms. It is one of the real good things of recent introduction."

The plants we offer have not been forced, but have been cool-grown and are stout and stocky. With ordinary care they should remain in full bloom for several months, either in the house or conservatory.

**Plants**, from 2¼ inch pots, each, 20 cts.; per dozen, \$2.00; by mail, each, 30 cts.

**Plants**, from 4 inch pots, each, 35 cts.; per dozen, \$3.50; by mail, each, 50 cts.

**Plants**, in 6 inch pans, each, \$1.00; per dozen, \$10.00; by express only.

## BEGONIA CALEDONIA.

### The White Variety of Begonia Gloire de Lorraine.

Last year European horticulturists were startled by the unexpected appearance of a pure white variety of **Begonia Gloire de Lorraine**, which when exhibited in London received the well merited distinction of the First Class Certificate of the Royal Horticultural Society. Desirous of placing this new plant within the reach of our customers at the earliest moment, our MR. JAMES FARQUHAR, made a special trip to Europe, and arrangements were made with the Originator that enable us now to offer in the United States the only plants which have passed out of his hands for simultaneous delivery with him.

**CALEDONIA** has the same beautiful foliage as "Gloire de Lorraine," the same habit, the same height, the same marvelous floriferousness, the same persistency of petal, the same continuity of flowering, while it has proved itself of even more vigorous and robust growth.

**Plants**, for delivery about Nov. 1st, each, \$5.00.

**BEGONIA GLOIRE DE LORRAINE, Nana Compacta.**  
**OUR OWN NOVELTY.**

*Begonia Gloire de Lorraine, Nana Compacta.*

One third natural size.

This beautiful Begonia differs from Gloire de Lorraine in being of upright instead of drooping habit, bearing enormous trusses of bright salmon-rose flowers, lighter than those of the parent, of larger size, more numerous and lasting much longer. Many of our plants grown in 4-inch pots, last season carried from 300 to 400 fully expanded blossoms at one time.

**Plants from 2½ inch pots, each 20c.; per doz., \$2.00; by mail, each 30c.**  
**Plants from 4 inch pots, each 35c.; per doz., \$3.50; by mail, each 50c.**

## HARDY HYBRID PERPETUAL ROSES.

The finest English-grown stock. For delivery in March or April, 1901.

One of the leading English Rosarians is now growing for us many thousands of the most popular Hybrid Perpetual Roses. Experience has proved these much better adapted to withstand our rigorous New England climate than Dutch or French Roses.

Our English-grown Roses, have given the highest satisfaction, and the stock we offer will be the best produced. The soft-wooded plants grown on the meadows of Holland, so generally sold here, are unsuited to our climate and cause disappointment.

Selected Plants each 50c.; per dozen, \$4.00; per 100, \$25.00.

SEE LIST OF VARIETIES ON PAGE 48.

## POT GROWN STRAWBERRY PLANTS.

These if planted in August or September produce a large crop the next summer. Being grown in pots they may be shipped to a distance and planted with almost no interruption to their growth. The earlier they are planted the larger the first season's crop will be. The plants may be set in beds of three rows, one foot apart, and one foot distant in the rows, with a space of two and a half feet between the outside rows of adjoining beds left for a pathway. They may also be planted in single rows three feet apart and one foot apart in the rows.

*Bi-sexual or staminate varieties marked S, are self fertilizing. Pistillate, or imperfect varieties are marked P, require a staminate sort planted near them for fertilization.*

**Prices:** The Talbot, \$4.00 per 100.  
Nick Ohmer, \$3.00 per 100.  
Other varieties, listed, \$2.50 per 100.

THE TALBOT.

**THE TALBOT.** (P.) This splendid new variety is of even stronger growth than the now famous Marshall Strawberry, and grown side by side with that variety has produced much heavier crops. The fruit is of bright red color, and does not turn blackish when fully ripe, as the Marshall is inclined to do. It is of roundish conical form; the flesh being firm, close grained, and of delicious flavor. When exhibited last year at the Worcester County Horticultural Society's Strawberry Exhibition, **The Talbot** received the highest award for excellence over all other sorts. Being a native of New England, the adaptability of **The Talbot** is assured, and it cannot fail to become a popular and profitable sort for both private use and the market.

**SAMPLE.** (S.) The flavor and fine color of the fruit is not surpassed.

**NICK OHMER.** (S.) New, second early; productive sort. Berries large, conical, glossy dark red, and of excellent flavor. This has been found the best and most productive sort for Winter forcing under glass.

**MARSHALL.** (S.) The "prize-taker" invariably; an enormous cropper and of very fine flavor.

**Brandywine.** (S.) Great cropper, succeeding best on heavy soils. Fruit large, bright red, of sprightly flavor.

**Glen Mary.** (S.) A good sort for family use. Berries large, conical, bright red color, firm, and fine flavor.

**Belmont.** (S.) A favorite sort for both market and family use in the vicinity of Boston. Fruit large and delicious.

**Clyde.** (S.) Second early; very heavy cropper. Berries conical, large and firm. Fine market sort.

**Haverland.** (P.) Fruit large, of good form and fine quality; luxuriant growing variety.

**Lovett.** (S.) Large and productive; early, fine formed and delicious.

**Bubach No. 5.** (P.) One of the best and most popular; very sweet.

**LAYER STRAWBERRY PLANTS.** Layer plants can be had in October at the following prices: **The Talbot**, \$2.00 per 100. **Nick Ohmer**, \$1.50 per 100. Other varieties above mentioned, \$1.00 per 100.

 We can supply plants of many sorts not included in the foregoing list.

## HOT-HOUSE GRAPES.

It has hitherto been necessary, when one desired to plant a Grapery to import the grape vines, if strong canes of the best sorts were desired, and the expense including duty and freight of p'ants in large pots was excessive.

To meet the long felt want of a home source of supply we have grown from the best imported stocks over a thousand plants, comprising the following sorts, namely:

- Black Hamburg.**
- Black Alicante.**
- Bowood Muscat.** White.
- Lady Downe's Seedling.** Black.
- Madresfield Court.** Black.
- Mrs. J. R. Pearson.** White.
- Muscat of Alexandria.** White.

Black Hamburg and Madresfield Court are adapted to both hot and cold graperies; the other sorts to hot graperies only.

**Strong plants of the above sorts \$1.00 each.**

## ENGLISH MILLTRACK MUSHROOM SPAWN.

The constantly increasing demand for mushrooms taxes to a greater degree the skill and perseverance of the grower. Fresh, live spawn must be obtained, without which success would be impossible. We are fully alive to the importance of quality in spawn to the mushroom-raiser and we get the best produced. It is prepared from virgin mycelium, in a compost most favorable to its development and preservation. It is germinated, and developed under special scientific methods, the conditions of air, light, heat and humidity of the spawning houses being carefully regulated. Our mushroom-spawn then is not the uncertain material of the past, but is of uniform quality, prepared by the most successful and progressive mushroom specialist in England. Under proper treatment, it has never been known to fail. We import every two or three months to ensure freshness.

Per lb., 15c.; 8 lbs., \$1.00; 100 lbs., \$9.00; by mail per lb., 25c.

**BOOKS ON MUSHROOM CULTURE.** The following are excellent:

- Mushroom Culture.** By Robinson, .68.
- How to Grow Mushrooms.** By William Falconer, \$1.40.

Messrs. R. & J. FARQUHAR & Co.,

The Mushroom Spawn I received from you last Fall is the best I ever had. My first bed began to yield on December 1st., and it looks fully as well today as at any time during its bearing. It is completely alive with small Mushrooms. I expect to get into Boston in about two weeks, when I will bring in another order for Seeds.

Respectfully yours,

ANDOVER, MASS., Jan. 20, 1900.

J. H. PLAYDON.

Messrs. R. & J. FARQUHAR & Co.,

Gentlemen: — I wish to write you regarding the English Mill Track Mushroom Spawn I purchased from you. It is the finest I ever saw, the bed being completely covered with mushrooms of good texture and color.

Yours very truly,

MALDEN, MASS, Dec. 2, 1899.

D. F. R., Supt. to E. S. C.

## LAWN GRASS.

### SUGGESTIONS ON MAKING AND CARING FOR LAWNS.

The ground selected for lawn, should have at least a foot in depth of good soil; it should be thoroughly pulverized and liberally enriched with well-rotted barn-yard dressing, dug well under, and the surface made perfectly smooth.

The seed sown should be a mixture of hardy, dwarf-growing grasses, free from the seeds of weeds, and when used on light soils, a little white clover should be added, say one pound to the bushel.

The seeds should be lightly raked in and the ground rolled to make the surface firm.

Perhaps the best time of the year to sow a new lawn is September; the natural seeds of weeds which are present in every soil do not start then, and the grass gets a season's growth in advance of the weeds. The next best season is early spring, the earlier the better, so that the grass may get started as much as possible before indigenous weeds.

The after care of a lawn is also important. It should be regularly cut, otherwise the coarser grasses will grow up and choke out the finer sorts, thus destroying the smooth velvety surface so much to be desired. It should be regularly enriched by top-dressing with good abatoir lawn dressing, fine ground bone, unleached wood ashes, etc. Lawn dressings composed entirely of chemicals, should be used cautiously and applied only when the grass is dry. Barn-yard manure should never be used to top-dress lawns; it usually contains seeds of noxious weeds from the hay, which when introduced, are difficult to exterminate.

Every spring the lawn should be raked over with a steel garden rake, which will take out dead grass and scratch the ground somewhat. A little lawn grass seed should be scattered over bare or thin spots, and the whole rolled to render the surface even and firm.

**Farquhar's Evergreen Lawn Grass.** A mixture of dwarf, hardy persistent grasses producing a close, deep green, velvety turf. Only fresh, clean seeds, of high germination are used. Our Grass Seeds are celebrated throughout New England and are extensively used in the parks of Boston, the Newport and Lenox estates and other leading summer resorts. Per bushel, \$4.00; per peck, \$1.00; per quart, 20 cents. By mail, postage-paid peck, \$1.50; quart, 25 cents.

**New Boston Parks Lawn-Seed.** We have received from Messrs. Olmsted, Olmsted & Eliot, their formula used in seeding the beautiful lawns and terraces of Boston's new parks. Franklin Park and in fact all the Metropolitan parks have been planned by this firm of eminent landscape architects, and their formula for the Lawn-Grass Seed mixture used may be accepted as the best which great experience and extended knowledge can suggest. The seed is fresh, clean and free from weeds, producing a perfect, velvety green turf in a remarkably short time.

62 lbs., sufficient for <i>one acre</i> (43,560 square feet) . . . . .	\$15.00
31 lbs., sufficient for <i>one-half acre</i> , (21,780 square feet) . . . . .	7.50
16 lbs., sufficient for <i>one-quarter acre</i> , (10,890 square ft) . . . . .	4.00
1 lb., sufficient for <i>700 square feet</i> . . . . .	.30

Add eight cents per pound to these prices if wanted by mail.

**ENGLISH LAWN GRASS, Finest Mixture.** Per bushel, \$3.00; peck, 75 cents; quart, 20 cents. By mail, post-paid, peck, \$1.25; quart, 25 cents.

**SPECIAL GRASS SEED MIXTURES.**

This department of our business receives particular attention. All our formulas and mixtures are personally prepared by Mr. James Farquhar.

**FARQUHAR'S MIXTURE FOR SHADY PLACES.**

This is a mixture of extra fine grasses adapted for growing in the shade. We recommend the use of this mixture wherever other grasses have failed to make a close sward.

Quart 35 cents; peck, \$1.50; per bushel of 20 lbs., \$5.00.

The following specially prepared Mixtures at a uniform price as follows, viz.:

Quart, 30 cents; peck, \$1.50; per bushel of 20 lbs., \$5.00. If by mail add 8 cents per quart extra. Special quotations for large quantities.

**THE "GOLF LINKS" MIXTURE.**

During the last visit to Scotland, we visited several of the courses, to ascertain the variety of Grasses generally used to produce the fine, close sward so common there. We have supplied several Clubs the past year with the Mixture, which we now offer and which is the result of a careful study of the requirements for making beautiful Golf Links. We do not hesitate to say that it has given entire satisfaction.

**THE "PUTTING GREEN" MIXTURE.**

The very finest low growing Grasses are contained in this Mixture and they are also very hardy. This Mixture will produce a beautiful and lasting green turf wherever used.

**THE "TERRACE" MIXTURE.**

This is a Mixture of strong, deep rooted Grasses for "banks" or "terraces." Although the Grasses are strong and deep rooted, they will produce a fine green velvety appearance, and also prevent the Terrace from being washed away during heavy rains.

### JOHNSON'S GARDENER'S DICTIONARY.

Every one with a garden should own this admirable revised and greatly enlarged edition of Johnson's Gardener's Dictionary, first published in 1846. It contains a full and reliable list of cultivated plants, names printed in bold type, rendering references easy. An important feature of the work is the placing of synonyms alongside the correct name, instead of in a separate list. The habitat of each variety is given, also the date of its introduction. Practical cultural directions are given. Insect foes, diseases, and their remedies are fully described, and many of the former are illustrated. The Dictionary is a large handsomely bound volume, and is a reliable book of reference for gardeners, florists, and amateur horticulturists . . . \$4.00
